# Wilmes Lake Alum Treatment Facility

South Washington Watershed District  
City of Woodbury - Minnesota

2024 MESERB Summer Conference  
June 13, 2024

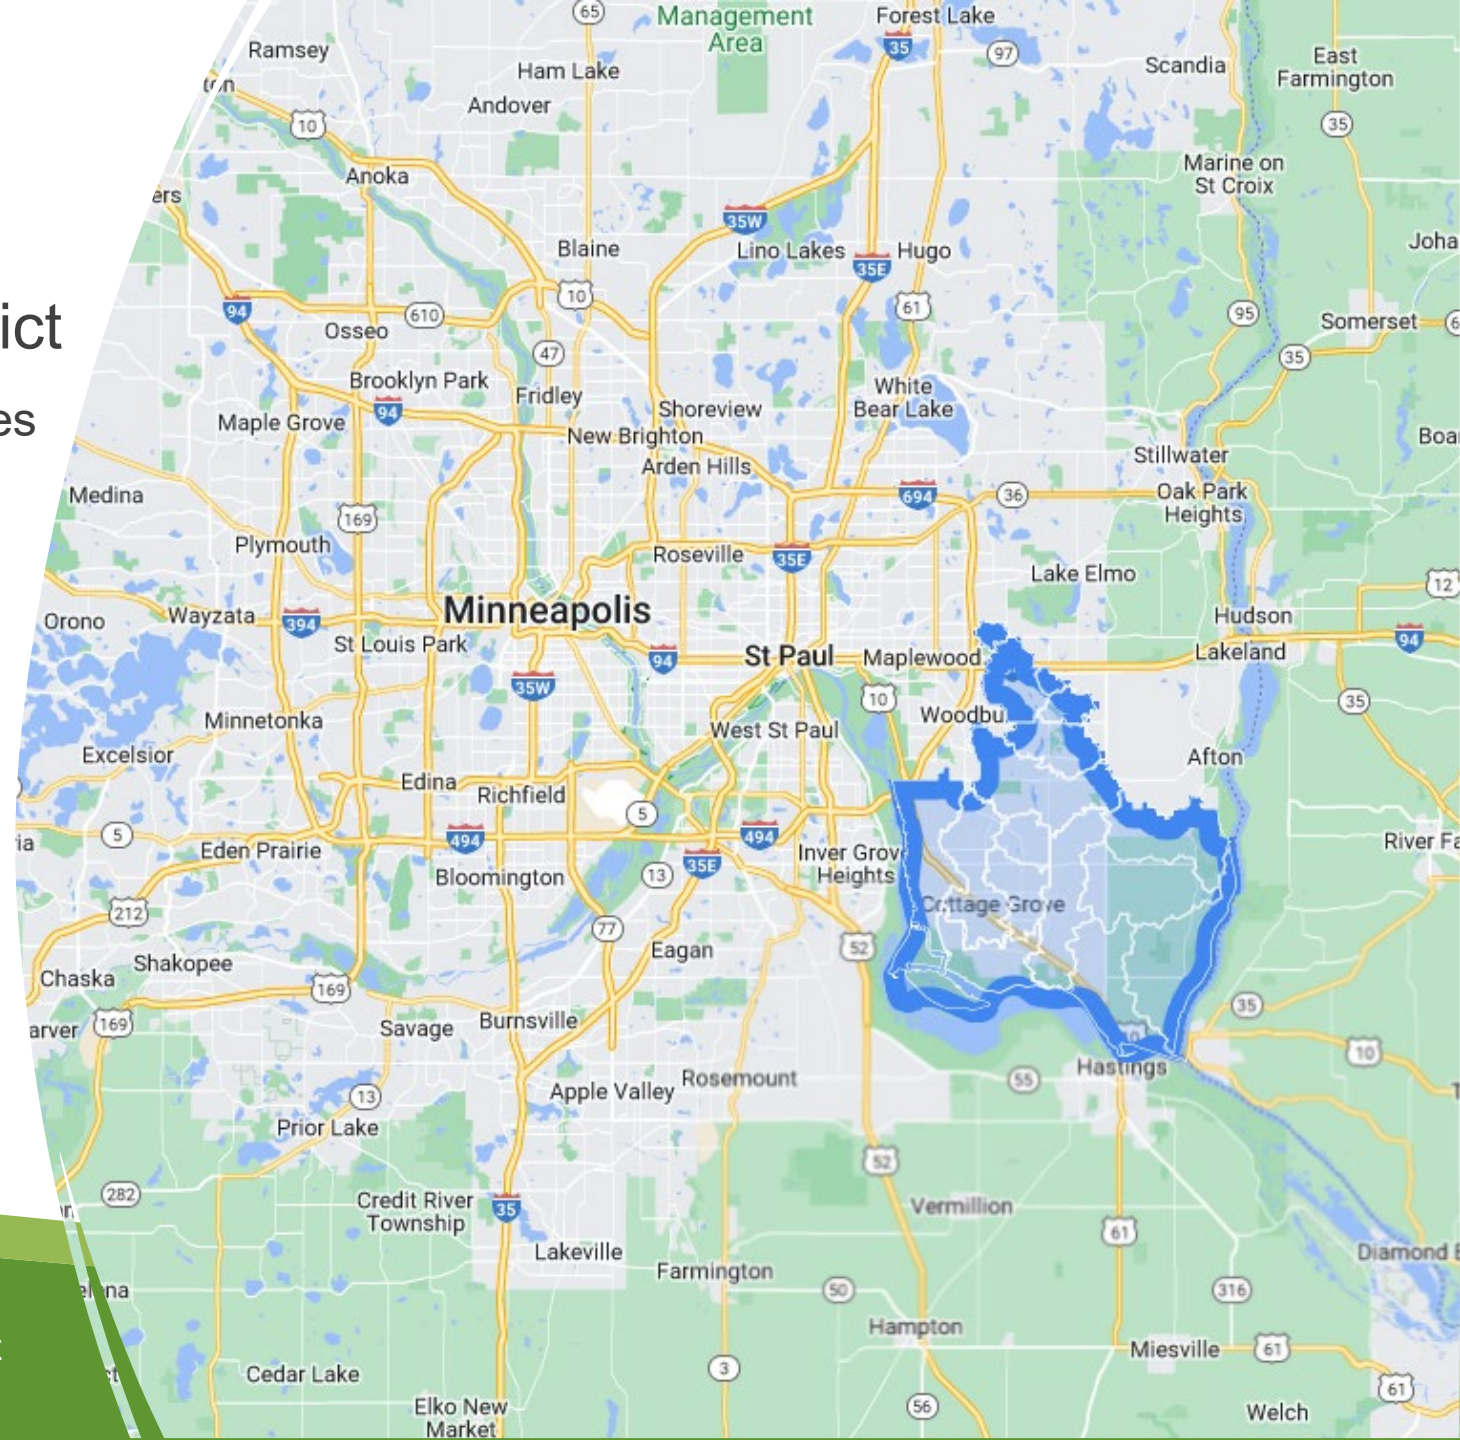

# Agenda

- Location & Background
- Project Description
- Project Goals
- Recommended Improvements
- Construction Status

# Location

## South Washington Watershed District

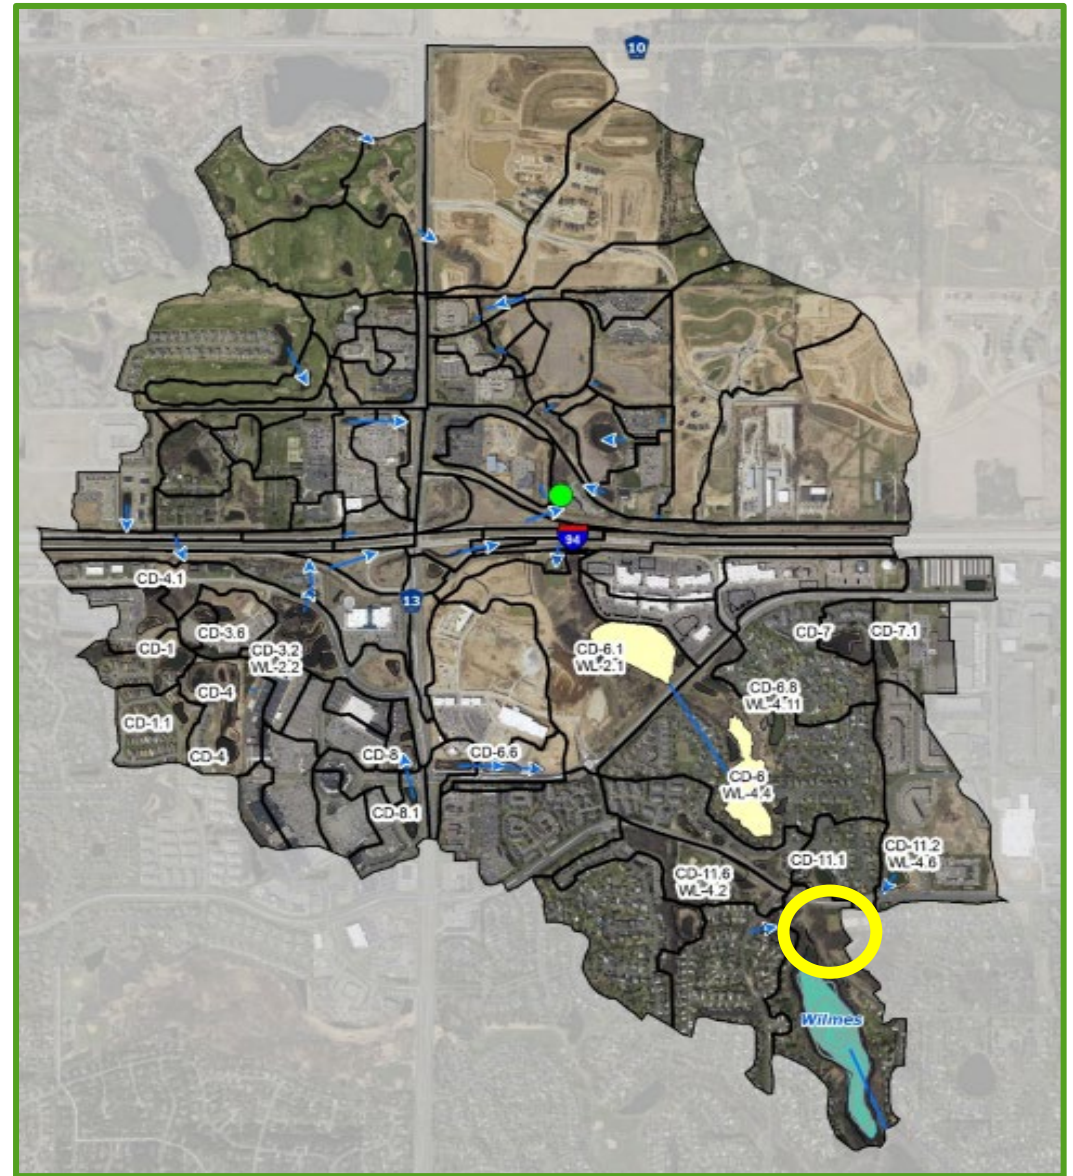

- Established in 1984 to manage the resources of the watershed
- Located in Washington County
- Southeast of St. Paul, MN
- Intersects 10 municipalities

Wilmes Lake Alum Treatment Facility  
South Washington Watershed District

# Background

- Watershed area of 3,242 acres
- North Wilmes Lake is listed on Minnesota's 303d list as impaired for TP
- 2018 lake management plan set a TP reduction goal of 153 lbs/yr
- 2019 regional alternative analysis identified regional treatment facility

# Background

- Previous study considered alternative methods for achieving the desired TP reduction.
- Alum treatment was recommended
- 2020 HR Green alternatives analysis for implementing chemical treatment
- Treat 1-3 cfs of inflow resulting in expected removal rates of 95-283 lbs TP/yr

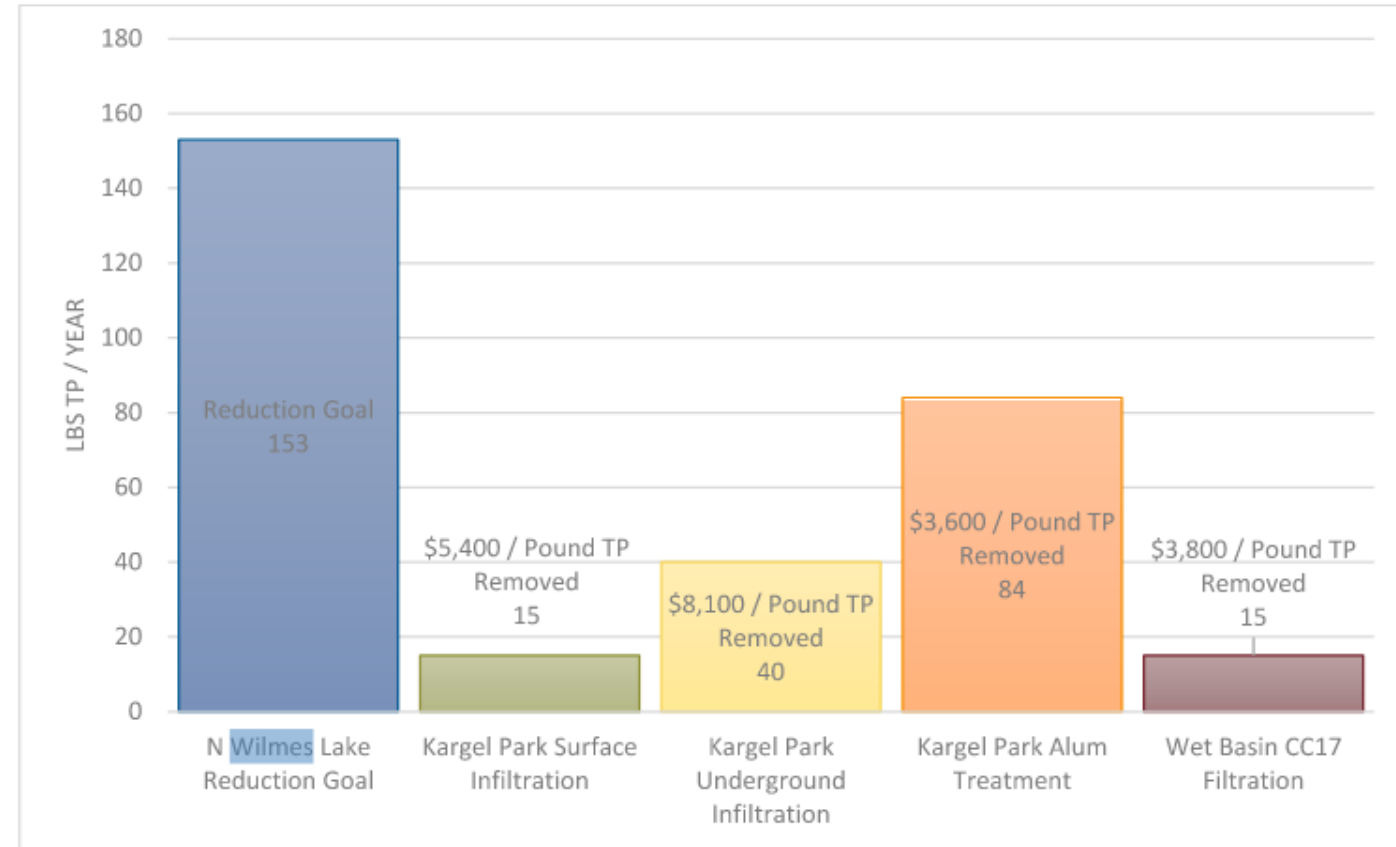

Figure 4: Kargel Park TP removal options compared to the North Wilmes Lake reduction goal

# Project Goals

- Improve water quality of Wilmes Lake
- Blend into park's natural setting
- Provide natural habitat
- Maintain pedestrian connectivity
- Partner with the City for operations and maintenance

Wilmes Lake Alum Treatment Facility  
South Washington Watershed District

# Project Description

## Considerations:

- Ferric Chloride vs. Aluminum Sulfate
- Site layout
- Treatment facility with a lift station, forcemain and settling basin

# Project Description

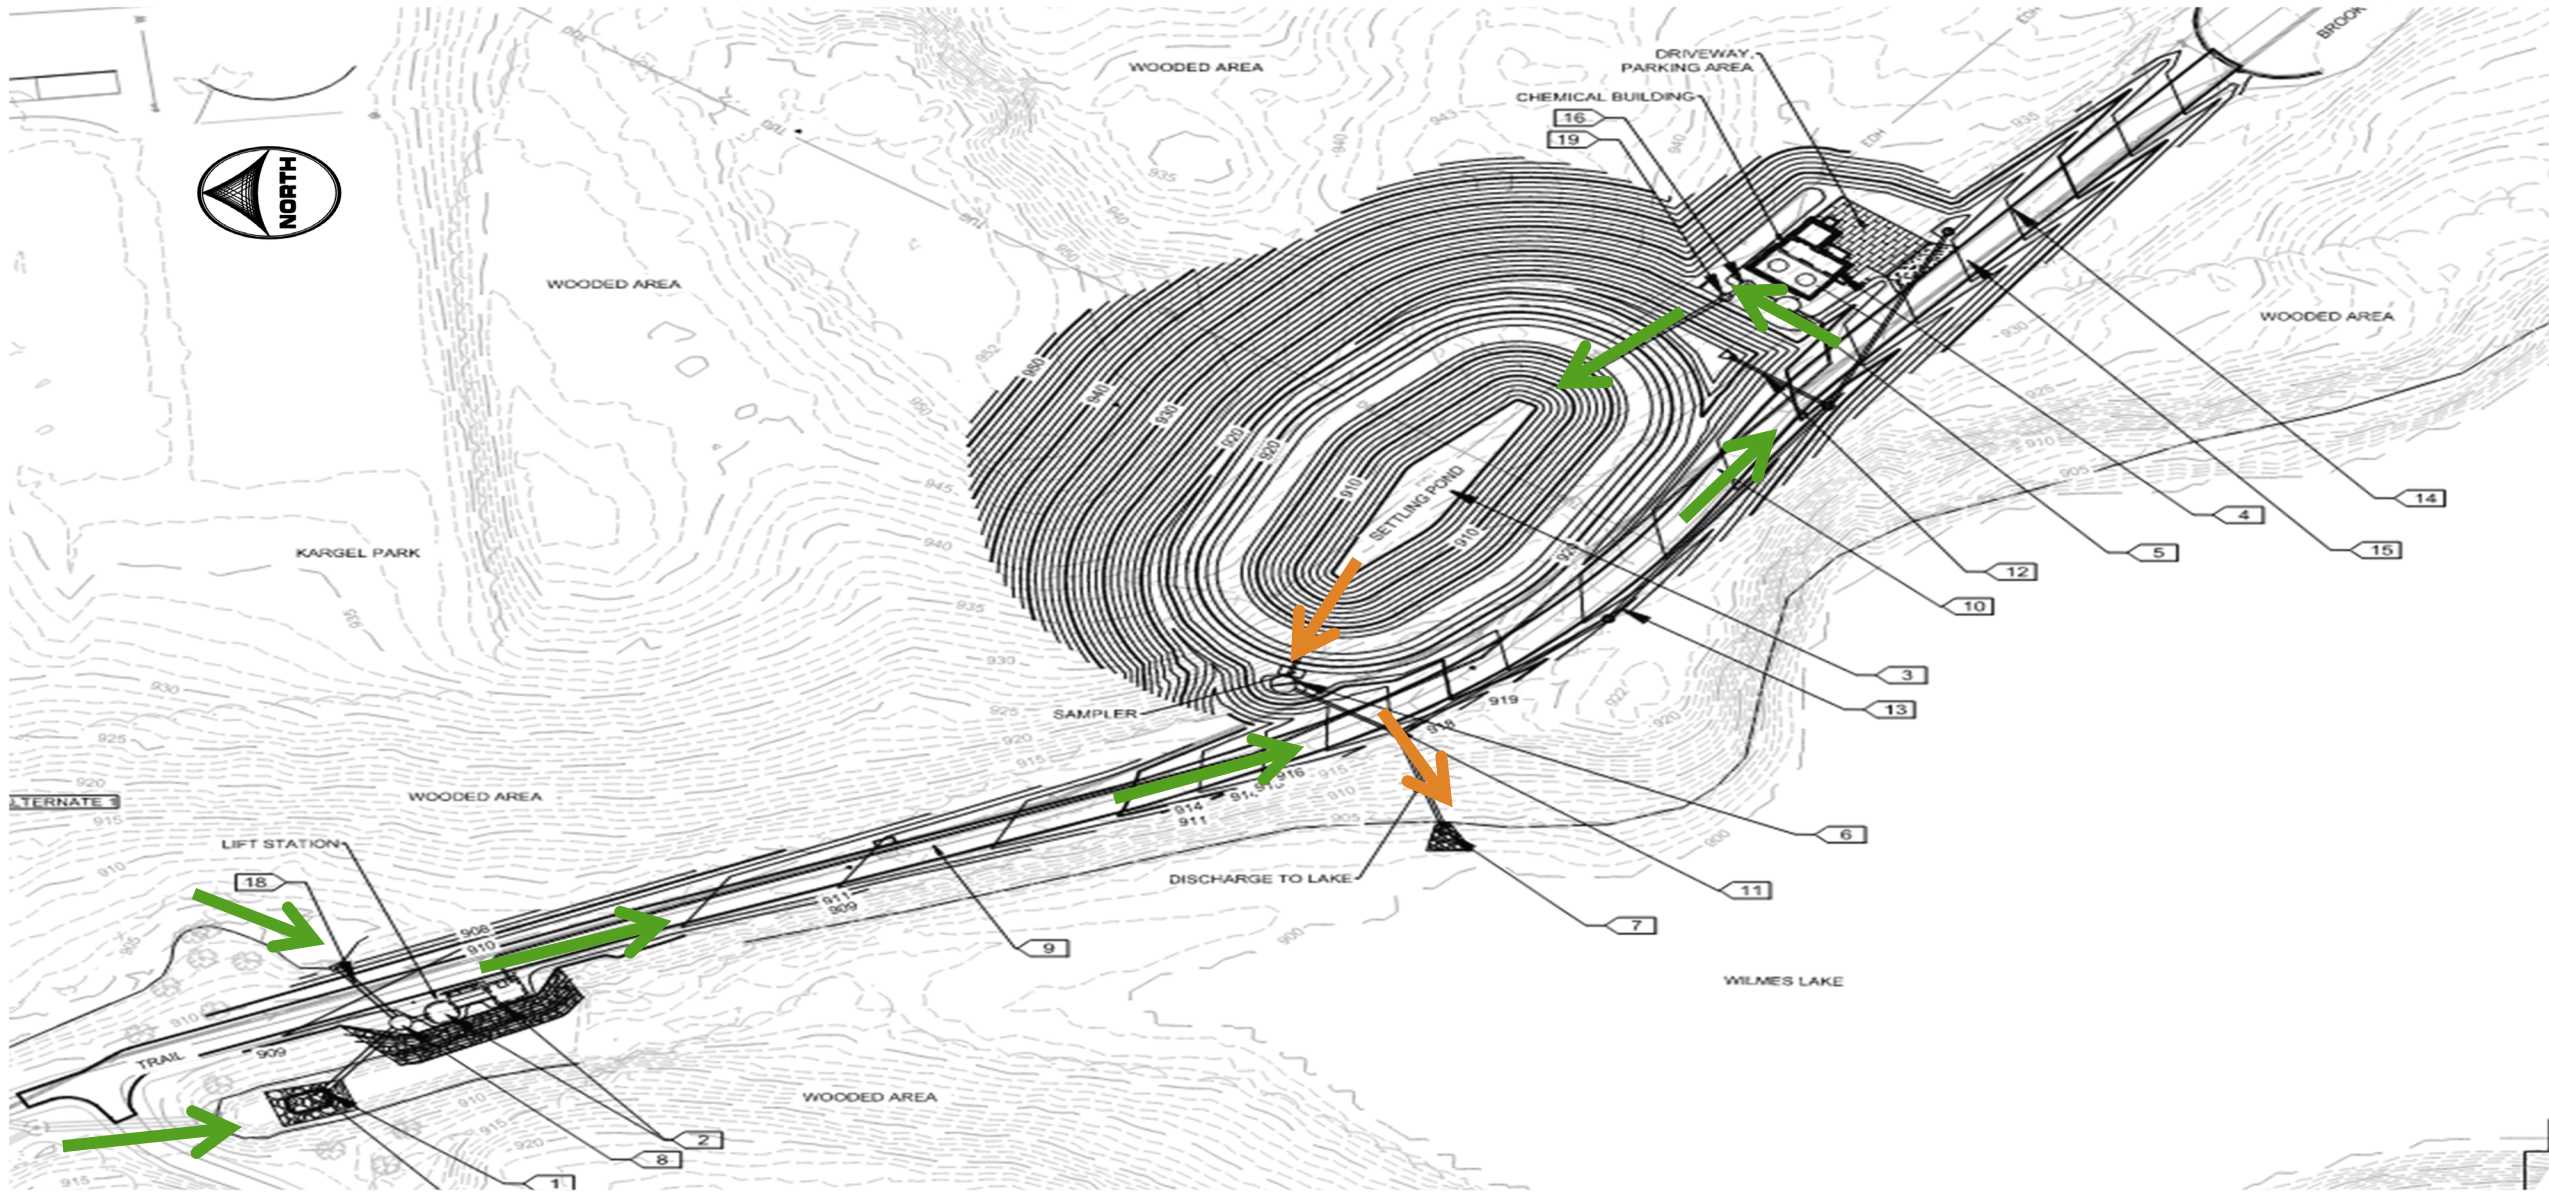

How does it work?

- Coagulation
- Flocculation
- Sedimentation

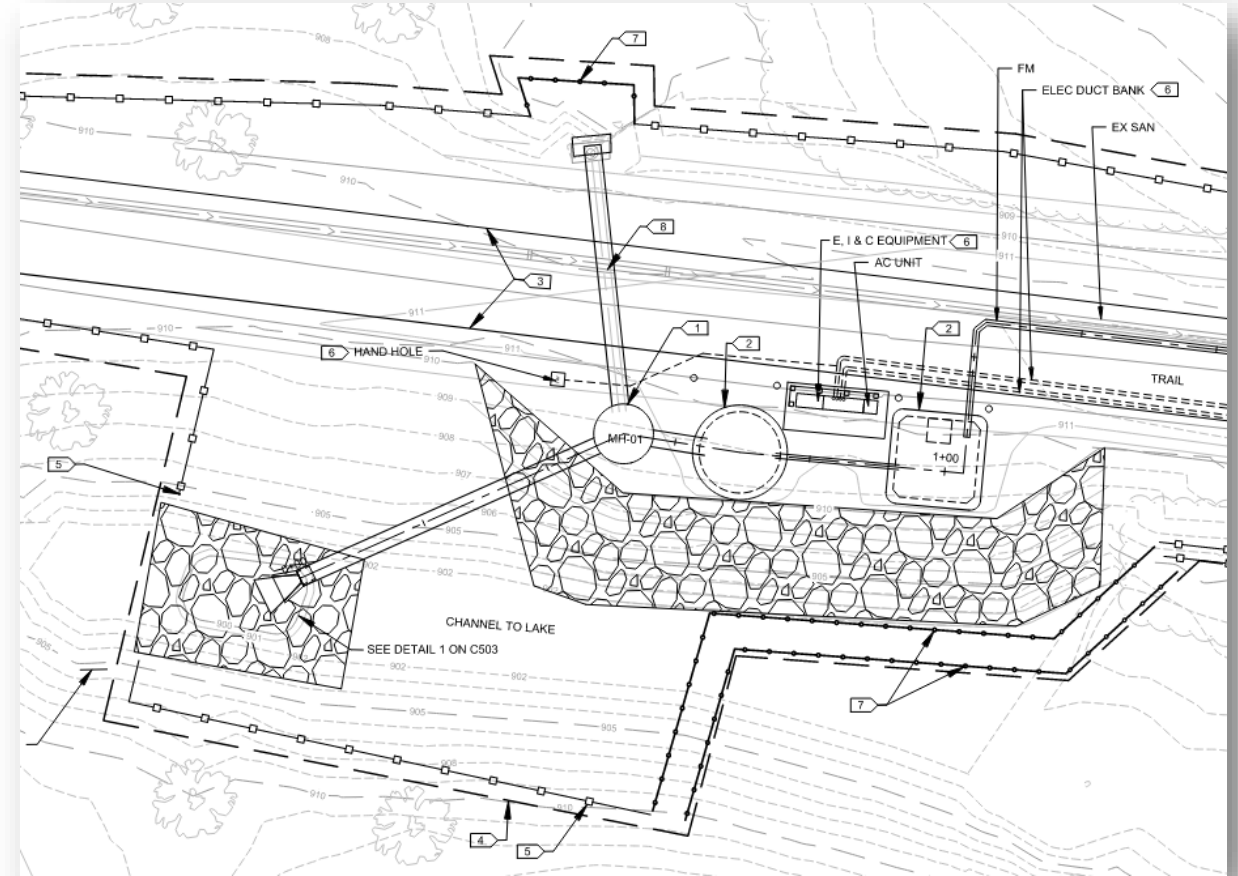

# Recommended Improvements

# Recommended Improvements

## Lift Station

- ▶ Triplex submersible station
- ▶ Each pump rated for 1cfs (448gpm)
- ▶ Median flow within channel: 1.3 cfs
- ▶ Mean flow with channel: 3.2cfs
- ▶ Flows monitored by SWWD
- ▶ SAFL Baffle installed upstream of pumps

# Recommended Improvements

## Lift Station

- ▶ Triplex submersible station
- ▶ Each pump rated for 1cfs (448gpm)
- ▶ Median flow within channel: 1.3 cfs
- ▶ Mean flow with channel: 3.2cfs
- ▶ Flows monitored by SWWD
- ▶ SAFL Baffle installed upstream of pumps

# Recommended Improvements

## Lift Station

- ▶ Triplex submersible station
- ▶ Each pump rated for 1cfs (448gpm)
- ▶ Median flow within channel: 1.3 cfs
- ▶ Mean flow with channel: 3.2cfs
- ▶ Flows monitored by SWWD
- ▶ SAFL Baffle installed upstream of pumps

# Recommended Improvements

## Lift Station

- ▶ Triplex submersible station
- ▶ Each pump rated for 1cfs (448gpm)
- ▶ Median flow within channel: 1.3 cfs
- ▶ Mean flow with channel: 3.2cfs
- ▶ Flows monitored by SWWD
- ▶ SAFL Baffle installed upstream of pumps

# Recommended Improvements

## Settling Basin

- ▶ ~130,000 CF storage
- ▶ 37 hours detention time @ 1cfs
- ▶ 2' clay liner required

# Recommended Improvements

## Chemical Building

- ▶ Needed to be visually pleasing
- ▶ Blend into park setting
- ▶ Low lighting for wildlife
- ▶ Permeable pavement
- ▶ Non-reflective tin roof

# Recommended Improvements

## Chemical Building

- ▶ Needed to be visually pleasing
- ▶ Blend into park setting
- ▶ Low lighting for wildlife
- ▶ Permeable pavement
- ▶ Non-reflective tin roof

# Recommended Improvements

Wilmes Lake Alum Treatment Facility  
South Washington Watershed District

# Construction Status

## How are things going?

- ▶ Lift station constructed awaiting pump installation
- ▶ Basin grading complete
- ▶ Building foundation complete
- ▶ Storm sewer piping is in
- ▶ Landscaping to be completed in spring/summer 2024

# Construction Status

# Construction Status

# Site Restoration

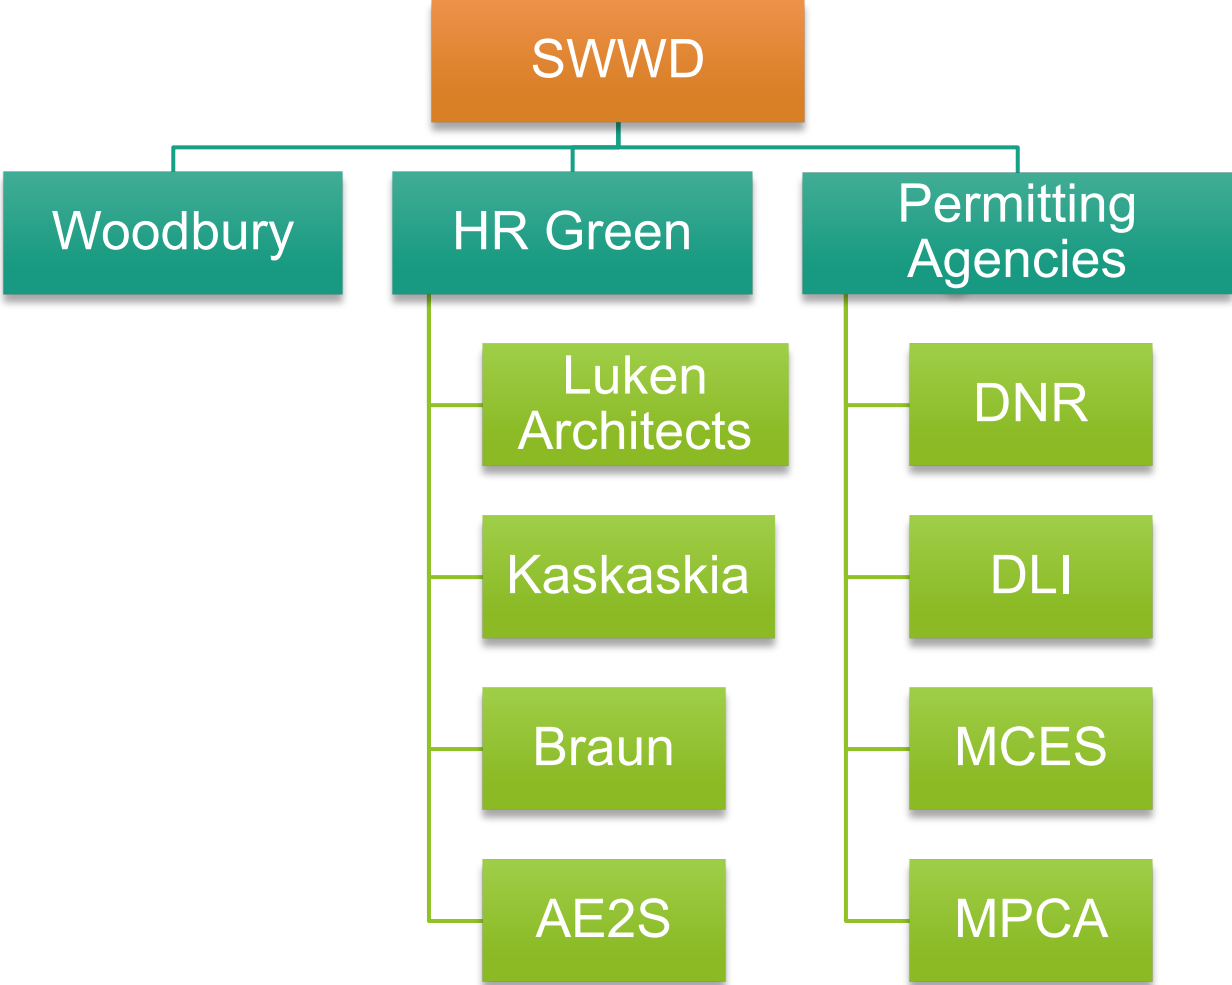

Wilmes Lake Alum Treatment Facility  
South Washington Watershed District

# System Operation

- ▶ Dredging will be required in the future
- ▶ Sludge to be monitored
- ▶ Public notices will be posted explaining the process
- ▶ Sampling
  - ▶ TSS
  - ▶ pH
  - ▶ Total Phosphorus

# Design Collaboration

Wilmes Lake Alum Treatment Facility  
South Washington Watershed District

# Permitting

- ▶ DNR – considered a public water – need public waters permit – applies to improvements below OHWL
- ▶ DLI – building, plumbing and site permit review
- ▶ MPCA – NPDES Permit - waste water discharge permit
- ▶ MCES – sludge disposal

# Questions

**Bridget Osborn, P.E., CFM**
